BigPrint TV — how to shoot the video

Simple plan with pictures. Total video: **2 minutes 43 seconds** (the limit is 3:00). Deadline: Thursday 23 October, 12 noon Pacific = Friday 24 October, midnight Pakistan time.

What you already have

The TV footage is done (folder **video/clips**). The eye animation is done (**scotoma_animation.mp4** on your Desktop). You printed the two bills: one sharp, one blurry. You only need to film 5 short pieces. About 1.5 hours of work. The drawings below show each pose.

Get ready (before filming)

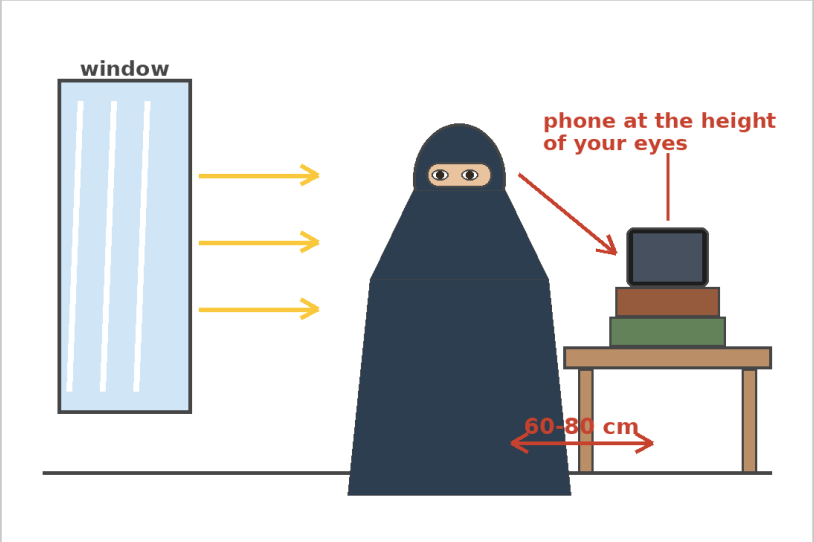

1. Tape over your name and details on the OCT scan papers. Only the eye pictures should be clear.

2. Fold the sharp printed bill in three, then open it again. Now it looks like a letter from the post.

3. Sit at a table facing a window. Daylight on your face. Plain wall behind you.

4. Put the phone sideways (horizontal), at the height of your eyes, 60-80 cm away. Rest it on some books.

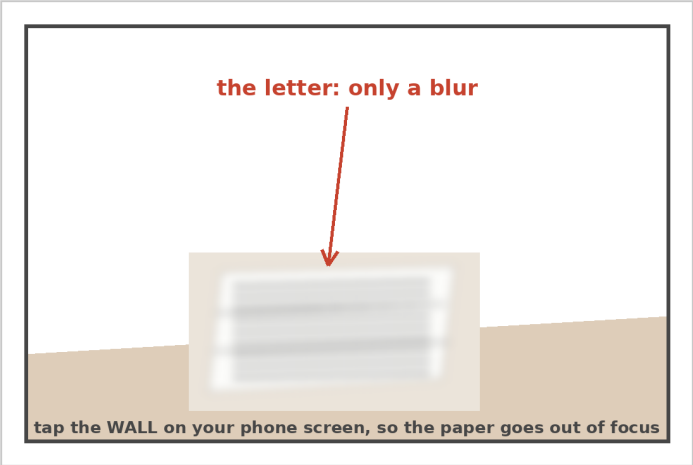

5. Quiet room. No fan. Tap and hold on the screen so the camera locks. If the niqab softens your voice on the test clip, bring the phone closer, or record the lines separately with the phone lying near you and we join voice and picture in the edit.

Film these 5 pieces (record each one 3 times, keep the best)

Piece 1 — The letter you cannot read (5 seconds, no talking)

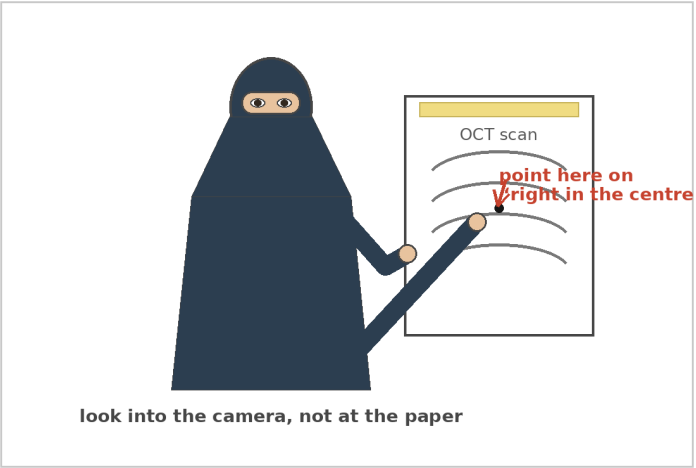

Put the folded bill on the table. Point the phone at it, but tap the WALL behind on the screen, so the paper goes out of focus. Only a blur. Hold still for 5 seconds.

Piece 2 — You, with the scan (15 seconds)

Look into the camera, not at the paper. Hold the taped scan up beside you and point at its centre when you say “right in the centre”. Your eyes do the talking: keep them on the lens.

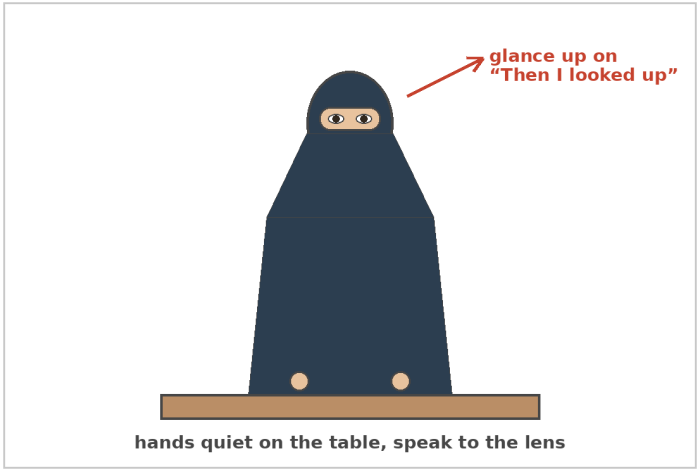

Say: "Hi, I am Rukhsar. A few months ago I hurt my eyes by looking at the sun. This is the scan of my eye. The damage is one small spot, right in the centre. And the centre is exactly where we read."

Piece 3 — You, the idea (17 seconds)

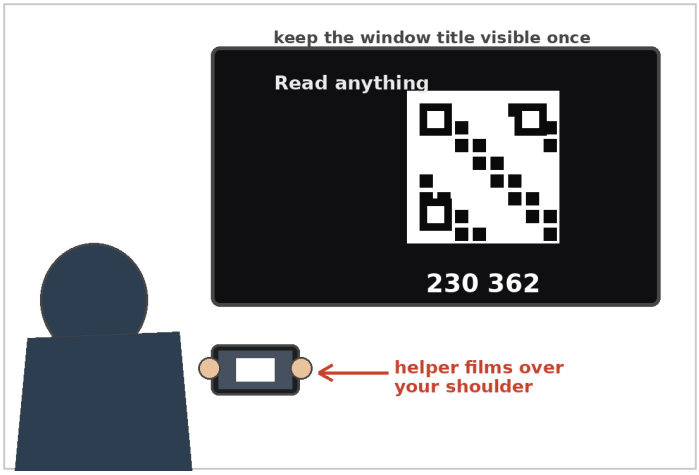

Hands quiet on the table. Glance up and to the side on “Then I looked up”, then back to the lens.

Say: "For weeks I could not read my phone, and I could not read my letters. Then one evening I looked up. The biggest screen in my house was already in the room, and I knew how to use its remote. So I built BigPrint TV. Here is how it works."

Piece 4 — Phone scans the TV (film it all, we use 16 seconds)

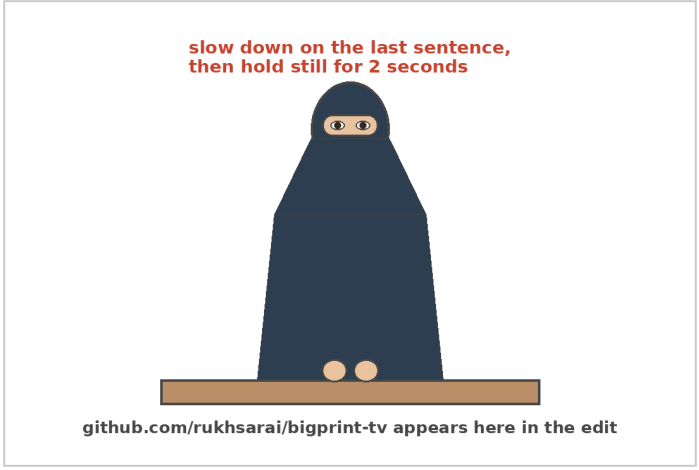

App on the TV (the simulator, full screen). A helper films over your shoulder, so the TV and your hands are both in the picture. Scan the QR square, tap the link, photograph the SHARP printed bill. Keep filming until the letter appears. Keep the window title visible at least once — the rules ask for proof it runs on the simulator. While you are set up, also upload the BLURRY page once, so the TV shows the “Check” warning on your real paper.

Piece 5 — You, the ending (22 seconds)

Same seat as pieces 2 and 3. Hands folded. Slow down on the last sentence, then hold still for 2 seconds.

Say: "I built this for myself. But millions of people live with sight loss, most of them older, and their letters keep coming. It costs about three cents a letter, and it is open source. BigPrint TV. The television you already own, reading your mail."

The timeline (give this to the editor, or to Claude)

Time	What is on screen	Sound
0:00 - 0:03	Piece 1: the blurred letter	The TV voice says the bill amount (take it from clip 05)
0:03 - 0:08	TV clip: the letter in big print	Same voice keeps talking
0:08 - 0:10	Black screen, white words: BigPrint TV	Silence
0:10 - 0:25	Piece 2: you with the scan	Your voice
0:25 - 0:31	The eye animation (6 s): the black dot eats the $92.58	You say: “The word I look at is the word I lose.”
0:31 - 0:48	Piece 3: you	Your voice
0:48 - 1:04	Piece 4: phone scans TV, photo, letter appears	You say: “Anyone with a phone scans the code and photographs the letter. The phone is only a camera.”
1:04 - 1:26	TV clips 03 + 04: big print, figures on top, moving line by line	You say: “Ten seconds later the letter is on the TV. The amount, the date and the account number stay at the top. Every number comes from reading the page, never from an AI guess, and a second reader checks the money.”
1:26 - 1:42	TV clip 05: Listen, Pause, Keep listening	Let the TV voice be heard, then say: “Press Listen and the whole letter is read aloud, made only when you ask.”
1:42 - 2:00	TV clips 06 + 07 + 08: Main points, Exact words, bigger text, 3 colours	You say: “Three ways to read it. Text up to twice the size. And three looks, because eyes differ about what is easiest.”
2:00 - 2:11	TV clip 09: the blurry page and the warning panel	You say: “When a page is hard to read, it says so. A wrong number is worse than no number.”
2:11 - 2:21	TV clip 10: Next photo, Recent letters, Delete all	You say: “Next photo reads the next page. Letters stay one day, then everything is deleted.”
2:21 - 2:43	Piece 5: you. In the last 5 seconds show the repo address: github.com/rukhsarai/bigprint-tv	Your voice

How the timing was counted

A calm speaking pace is about 2.5 words per second. Every “Say” line above was counted: piece 2 is 38 words = 15 s, piece 3 is 43 words = 17 s, piece 5 is 47 words but you slow down at the end = 22 s. The TV clips are already the length written. Total: 2:43, with 17 seconds of safety under the 3-minute rule.

After filming

1. **1.** Send all pieces to Claude, or edit yourself in CapCut. Follow the timeline table.
2. **2.** No music anywhere. No logos. Captions on (YouTube makes them, then fix the mistakes).
3. **3.** Upload to YouTube as Unlisted. Open the link in a private window to check it plays.

4. Paste the link in the Devpost form. The description text is ready in DEVPOST_SUBMISSION.pdf.
